EXECUTIVE SUMMARY

Procedure-driven **Developer & SOC Analyst** with hands-on enterprise experience monitoring, triaging, and remediating multi-vector security incidents across enterprise SIEM and **Palo Alto Networks Cortex (EDR/XDR)** platforms. Proven frontline SOC performance resolving **95%+ of Level 1 alerts within strict SLAs**, authoring standardized investigation playbooks reducing false-positive triage times by **40%**, and engineering automated alerting tooling for 24/7 on-call shift readiness. Solid foundation in Linux/Windows system security, access control (RBAC/PAM), and network perimeter inspection.

PROFESSIONAL EXPERIENCE

SOC Analyst | Connex Vectra Oct 2025 – Present
Phnom Penh, Cambodia • Enterprise Managed Security Operations Center (SOC)

- **Enterprise Alert Triage & SLA Adherence:** Deliver 24/7 frontline security monitoring across SIEM and Palo Alto Networks Cortex (EDR/XDR); triage network and endpoint anomalies, resolving **95%+ of Level 1 alerts within SLA**.
- **Granular Telemetry & Root-Cause Investigation:** Correlate endpoint process execution trees, parent-child anomalies, command-line arguments, and firewall logs before escalating confirmed incidents to senior responders.
- **Investigation Playbook Engineering:** Authored and standardized **8+ repeatable SOC investigation playbooks**, decreasing duplicate alert handling time and false-positive triage by **40%** across the analyst team.
- **Shift Operations & Telemetry Automation:** Engineered a browser-level Cortex XDR telemetry interceptor and Telegram notification bot with audio-visual alarms for on-call shifts, ensuring zero missed incidents during off-peak hours.
- **Vulnerability Management & Hardening:** Partner with senior infrastructure engineers to assess vulnerability scan reports, review endpoint configuration baselines, recommend patch priorities, and audit firewall policies.

CORE COMPETENCIES & TECHNICAL SKILLS

Security Operations & Triage	Palo Alto Networks Cortex (EDR/XDR), SIEM Monitoring & Health Checks, Alert Triage & L1/L2 Escalation, Root Cause Analysis, File Integrity Monitoring (FIM), Playbook & SOP Development
Threat Intelligence & OSINT	Cyber Threat Intelligence (CTI), Dark Web Leak Monitoring, Ransomware Tracking, MITRE ATT&CK; Mapping, IOC Correlation & Risk Scoring, Sandbox Analysis (ClamAV, Yara, CAPEv2)
DevOps & Home Server	Home Server Dashboards & Administration (Homelab / Self-Hosting), Cloudflare Tunnels (Zero Trust), DNS Management & Records, Docker Containerization & Isolation, Reverse Proxy, Linux Server Admin (Ubuntu/Debian)
Network & System Security	Firewall Management (UFW, nftables), Suricata IDS/IPS (lab), Network Sockets & Port Auditing, Windows & Linux Security, Access Control (RBAC/PAM), Active Directory Basics, System Hardening
Web & Mobile Development	Web Development (HTML5, CSS3, JavaScript/TypeScript, React 18, Tailwind CSS, REST APIs, WebSockets/SSE), Mobile Application Fundamentals (Responsive Mobile UI, Cross-Platform Architecture)
Software Engineering & Tooling	Python, Rust (Axum, Tokio), SQL (PostgreSQL, SQLite), Chrome Extension MV3, Docker, Git, Bash Scripting, PowerShell Basics, Wireshark

KEY CYBERSECURITY & INFRASTRUCTURE PROJECTS

Aegis: Cyber Threat Intelligence (CTI) & Dark Web Monitoring Platform

Rust (Axum/Tokio) • PostgreSQL 16 • React 18 • Docker • SSE

- **High-Throughput CTI Architecture:** Built an enterprise CTI platform in asynchronous Rust delivering sub-millisecond threat feed evaluation and zero-auth data ingestion.
- **Dark Web Harvesters:** Developed scrapers monitoring ransomware leak portals (LockBit 3.0, RansomHub, Play, Akira) and Telegram stealer logs without commercial APIs.
- **Real-Time Visualizer & MITRE Scoring:** Created a 60 FPS Canvas attack visualizer via SSE, correlating IOCs against dark web breaches and generating MITRE ATT&CK; mitigation playbooks.

Defensive Telegram IPS Bot with Multi-Engine Malware Analysis

Python 3 • Docker • ClamAV • VirusTotal v3 • CAPEv2 Sandbox

- **Real-Time File Interception & Quarantine:** Intercepts and holds uploaded group files, deleting malicious payloads immediately before group members can execute them.
- **Multi-Engine Sandbox Pipeline:** Automated a multi-tier sandbox pipeline chaining local Dockerized ClamAV (air-gapped), VirusTotal API v3, and dynamic CAPEv2 sandbox detonation.
- **Evasion Defense & Containment:** Implemented heuristic detection for double extensions (.pdf.exe), Unicode RTL tricks, and programmatically isolated compromised accounts.

Cortex XDR Incident Interceptor & SOC Night Shift Alerting System

JavaScript • Chrome Extension MV3 • Service Workers • Telegram API

- **Operational SLA Protection:** Engineered an enterprise SOC extension assisting 24/7 on-call shifts, ensuring strict compliance with 15-minute Level 1 response SLAs.
- **Network Stream Interception:** Captured Palo Alto Networks Cortex XDR telemetry in real time via service workers across multi-tenant partitions without API keys.
- **Instant Dispatch & Persistent Alarms:** Dispatched high-severity alerts to Telegram with deep incident links while triggering persistent audio alarms for on-call night analysts.

CERTIFICATIONS & CREDENTIALS

Palo Alto Networks Cortex XDR / SOC Operations Fundamentals	Validates enterprise detection & response (EDR/XDR) capabilities, endpoint telemetry investigation, policy enforcement, and frontline automated incident response workflows.
Wazuh SIEM & XDR Deployment & Threat Hunting (Hands-on Lab)	Validates multi-agent SIEM/XDR cluster deployment, active-response rule engineering, custom XML decoders, File Integrity Monitoring (FIM), and compliance auditing.

EDUCATION & LANGUAGES

Bachelor of Science in Computer Science <i>Norton University, Phnom Penh • Sep 2022 – Nov 2025</i> Core: DBMS, OOP (Java, C#), Data Structures, Networks, OS, Security.	Languages & Communication • Khmer: Native Proficiency • English: Professional Working Proficiency • Focus: Clear Technical Incident Reporting, SOP Documentation
